DETAILED ACTION

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1-7 are drawn to a multilayer microculture.

Group II, claim(s) 8-17 are drawn to a method of making a multilayer microculture.

Group III, claim(s) 20,26-28 are drawn to a method using the multilayer microculture to screen modulators of tissue development.

The inventions listed as Groups I-III do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons:

According to PCT Rule 13.2, unity of invention exists only when the *shared* (or corresponding) technical feature is a contribution over the prior art. The inventions listed as Groups I-III do not relate to a single general inventive concept because they lack the same or corresponding *special* technical feature. The shared technical feature of Groups I-III is a microculture comprising a plurality of layers having at least one cell type and a biopolymer, which is shown by SINGVI (Singvi, et al. USPatent No. 5,766,748) to lack a *special* technical feature and does not make a contribution over the prior art. In particular, Singvi teaches a coated glass plate microculture comprising: a multilayer (multiple monolayer islands); a cell (hepatocyte); and a biopolymer (col.9,¶1 ;col.10,¶3; col.23,Ex.5). Thus the restriction among the

different modes of invention (composition, method of making, and method of using) is deemed proper.
